<i>C. showae</i>	1	0	1	2	0.02
<i>C. gracilis</i>	0	1	0	1	0.01
<i>C. hyoilealis</i>	1	0	0	1	0.01
<i>C. lanienae</i>	1	0	0	1	0.01
<b>Total</b>	<b>8709</b>	<b>134</b>	<b>32</b>	<b>8875</b>	<b>100</b>

**Table 1:** *Campylobacter* species received and identified by the NRCCH in 2021.

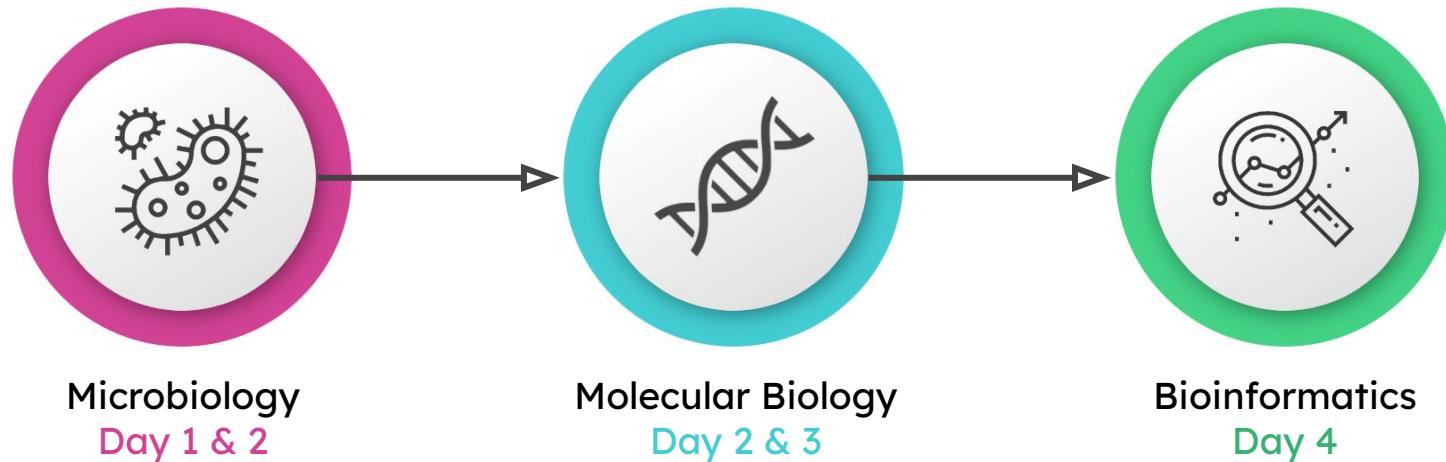

# Antimicrobial resistances in 2021

**Figure 1:** AST performed on approximately 7,700 *C. jejuni* + *C. coli* isolates for ampicillin (AMP), acid clavulanic + amoxicillin (AMC), ciprofloxacin (CIP), erythromycin (ERY), gentamicin (GEN) and tetracycline (TET).

Legends : % resistant - % susceptible

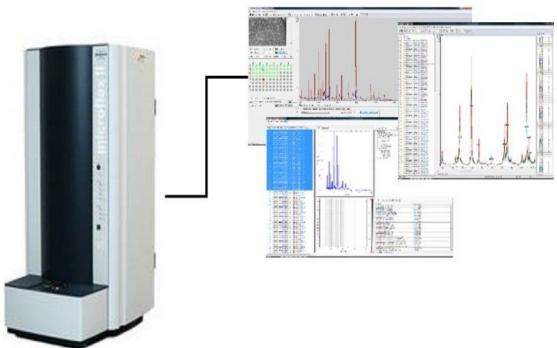

# 4 days of analyses workflow

# Day 1 and 2 - Growth, MALDI-TOF and Antimicrobial Susceptibility Testing

**Fig2:** *C. jejuni* on CBA.

**Fig3:** Bruker MALDI-TOF.

**Fig4:** Disk-diffusion AST.

- **Isolate growth :** **Columbia blood agar** in **microaerobic** conditions for **24H at 37°C**.
- **Species identification :** MALDI-TOF mass-spectrometry.
- **AST :** CASFM/EUCAST 2020 recommendations for **AMP, CIP, ERY, TET** and **GEN**.  
**Mueller-Hinton** growth in microaerobic conditions for **48H at 37°C**.

## Day 2 - DNA extraction

**Figure 5:** Picture of Roche's MagNA Pure 96 system.

- **DNA** is **extracted** from pure bacterial cultures using the MagNA Pure 6 DNA and viral NA SV kit
- **DNA purification** is performed by bacterial lysis on a MagNA Pure 96 system (Roche Applied Science).

# Day 2 - Library preparation

- Library preparation is realized using Illumina kits from day 2 to day 3.
- We plan to use automatic preparation systems (such as Beckman NGeniS) to improve both handling time and quality.

**Figure 6:** Illumina DNA Flex Library Prep kits.

# Day 3 - Whole Genome Sequencing (WGS)

**Figure 7:** Illumina Iseq 100 sequencer.

- Paired-end next-generation sequencing (NGS) is performed on **~24** DNA samples using Illumina Iseq 100.
- For larger runs, we send **96 samples** plates to a third-party company (Integragen, Paris).

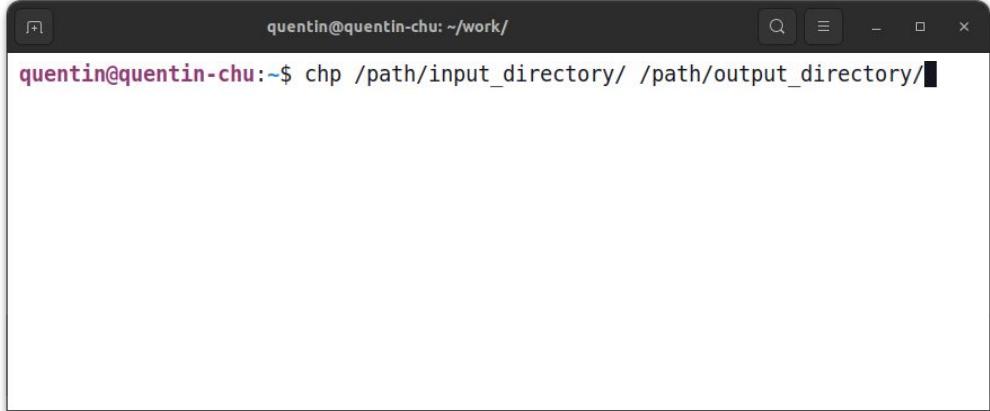

# Day 4 - Bioinformatics analyses

**Figure 8:** Raw sequencing data (compressed .fastq files).

# Day 4 - Bioinformatics pipeline preview

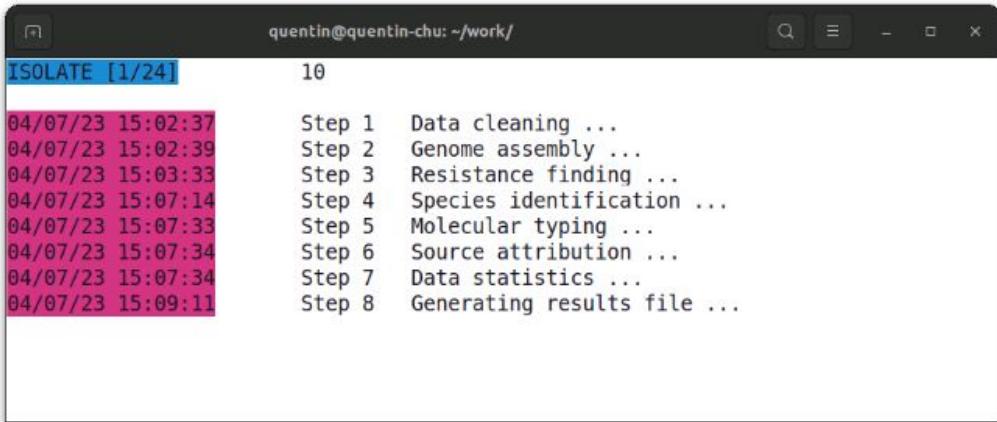

A screenshot of a Linux terminal window titled "quentin@quentin-chu: ~/work/". The window shows a command being typed: "quentin@quentin-chu:~\$ chp /path/input\_directory/ /path/output\_directory/". The terminal has a standard window title bar with icons for search, minimize, maximize, and close.

**Figure 9:** The NRCCH bioinformatics pipeline can be run using Linux terminal giving the path to raw sequencing files and the output results directory.

# Day 4 - Bioinformatics pipeline preview

A screenshot of a terminal window titled "ISOLATE [1/24]" running on a Linux system. The command "10" is entered. The log output shows the start time and steps for each of the 10 samples:

Time	Step	Description
04/07/23 15:02:37	Step 1	Data cleaning ...
04/07/23 15:02:39	Step 2	Genome assembly ...
04/07/23 15:03:33	Step 3	Resistance finding ...
04/07/23 15:07:14	Step 4	Species identification ...
04/07/23 15:07:33	Step 5	Molecular typing ...
04/07/23 15:07:34	Step 6	Source attribution ...
04/07/23 15:07:34	Step 7	Data statistics ...
04/07/23 15:09:11	Step 8	Generating results file ...

**Figure 10:** Illustration of the pipeline while running. Each sample, step and corresponding starting time are indicated in order to follow the progress.

# Day 4 - Pipeline analyses workflow

# Day 4 - Pipeline analyses workflow

# Day 4 - How AMR finding works?

<b>01</b> Data cleaning 	<b>02</b> Genome assembly <b>ATCG</b>	<b>03</b> AMR finding 	<b>04</b> Species identification 	<b>05</b> MLST 	<b>06</b> Source attribution 	<b>07</b> Stats 	<b>08</b> Report generating 
Sickle	SPAdes	Blastn	FastANI	Blastn	Structure, blastn, bwa, samtools	Prokka, BBmap, samtools	PyPDF

# Day 4 - Home-made Python script and Blast

1. (optional) Retrieve all AMR genes sequences from **NRCCH**, **CARD**, **NCBI**, **RESFINDER**, **PLASMIDFINDER**, **VFDB** and **VIRULENCEFINDER** databases.  
Pairwise comparison of all sequences to remove duplicates (ex. *ant(6)-Ia* = *aadE*).
2. Blastn or blastp of all sequences (**n = 20,000**) on fasta genome.
3. For multiple hits for one genomic region, it keeps the best score (similar genes are removed, ex. *bla<sub>oxo</sub>*).
4. Hits are aligned to references in order to identify any point mutations.

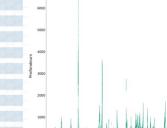

# Day 4 - Home-made Python script : pros

1. Blast is **no resource-consuming** (ex. ARIBA or similar can crash).
2. **No duplicate results**, specially about  $bla_{oxa}$  and  $tet$  genes.
3. Gives information about **chromosomal** or **plasmid** resistance.
4. Gives information on **positions** and therefore resistance **islands**.
5. **Perfect** results for point **mutations** finding (issues occurred with PointFinder).
6. Take into account **truncated** genes.

# Resistances among +1300 *Campylobacter* isolates from 2017

# Resistances among +1300 *Campylobacter* isolates from 2017

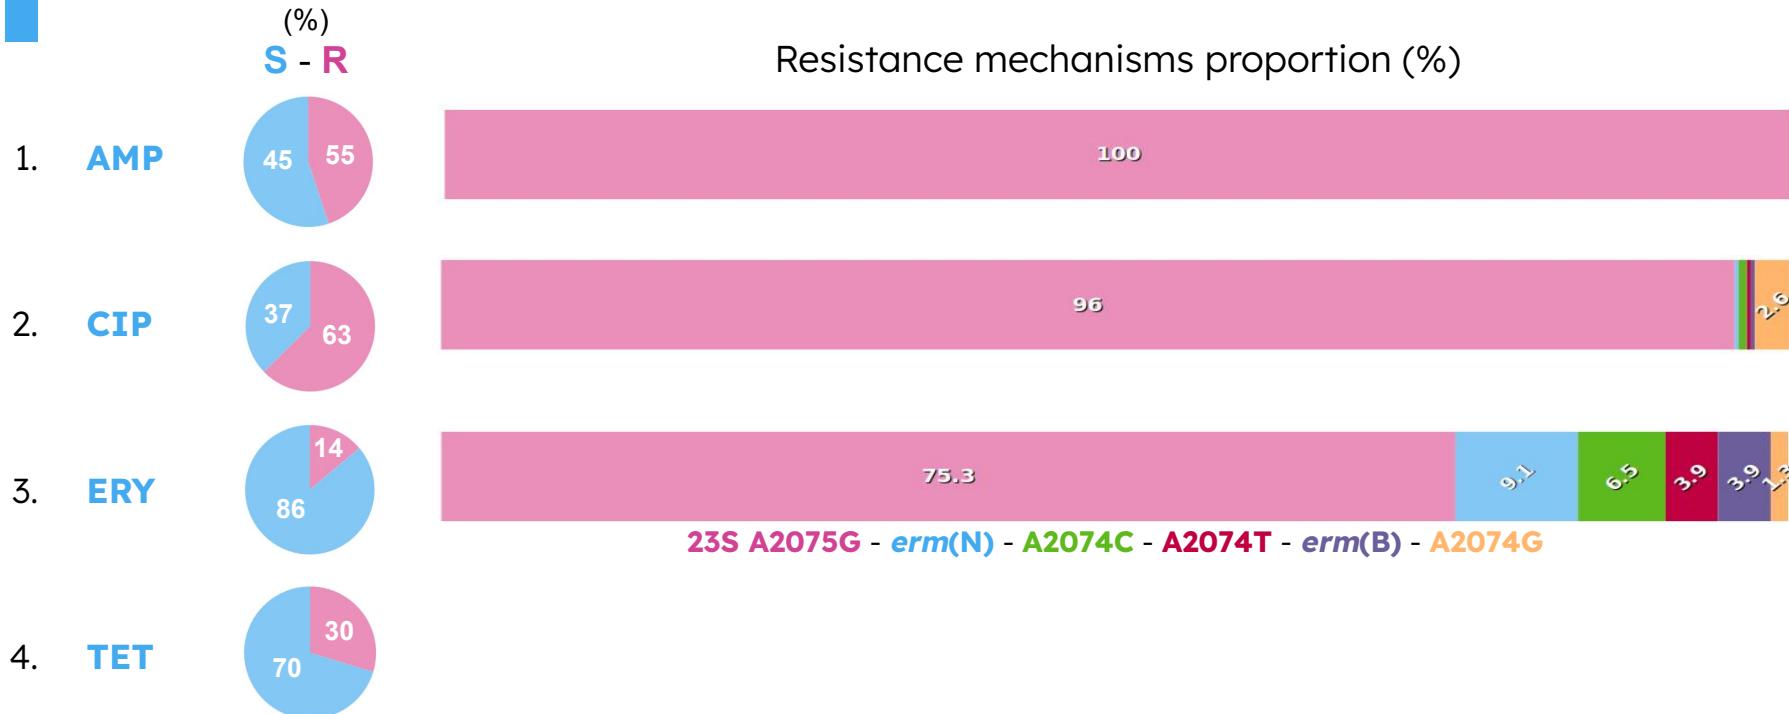

# Resistances among +1300 *Campylobacter* isolates from 2017

# Resistances among +1300 *Campylobacter* isolates from 2017

# Resistances among +1300 *Campylobacter* isolates from 2017

# Conclusion : since the workflow implementation ...

- It is used routinely and easily for every suspicious isolates (notably ERY-R and AMC-R *Campylobacter*).
- Reports are sent to every corresponding hospitals and medical laboratories.
- It helpeld to identify :
  - New resistance mechanisms
  - New species

Antimicrobial Agents and Chemotherapy

MECHANISMS OF RESISTANCE
